STEEL CEILINGS

Radiate Progress

IN EVERY line of endeavor, there is at least one name that stands out. In the production of steel ceilings, this name is Wheeling.

Wheeling not only stands for the most modern and practical steel ceilings, but also identifies the adjustment of the fire-safe ceiling to today's merchandising requirements. The Wheeling Steel Ceiling is manufactured to serve the double purpose of extra protection to stocks from fire and damage, and to make the interior attractive to the shopping and buying public.

The installation of a Wheeling Steel Ceiling is a step forward for the merchant, the cost of which is small compared with the benefits, the genuine advantages, which such installation immediately provides.

Adaptability—Wheeling Steel Ceilings are ideally suitable for residences, schools, lodge rooms, churches, restaurants, and many other interiors to which they contribute all of their notable advantages.

Ornamental—The realm of design has been combed thoroughly with a full understanding of what is applicable in giving the interior a proper touch of pleasing artistry. Attractive patterns that combine in a harmonious whole, in a variety to improve practically every type and size of room, corridor and entrance, are found in the Wheeling line.

Fire-Safe—Wheeling Steel Ceilings are fireproof. They are made from rolled steel sheets. Strong, uninflammable, they are a definite protection to property. They make a formidable barrier to fire. They have prevented many fire losses, as evidenced by letters and news clippings that have been received.

Wheeling Steel Ceilings protect. Not only do they insure against fire loss, but against falling plaster as well, in a most definite manner.

Sanitary—Because Wheeling Steel Ceiling panels fit up closely to eliminate gaps and open seams, dust cannot sift through from above. Because when properly painted they may be washed readily, they may be kept permanently bright and clean. They afford no home for vermin. They present a picture of wholesome cleanliness, because they are wholesomely clean.

Economical—An old ceiling may be transformed into a bright, modern, fire-safe steel ceiling in the least amount of time. The panels are accurately resquared and are so formed with die-cut nail holes and re-pressed beads that the erector finds it necessary to make no adjustments as he applies them. Rapid, efficient work results, with labor reduced to the minimum. So simple to erect are Wheeling Steel Ceilings that it is customary to apply them *right over the old ceilings without removing plaster.* As time makes cleaning necessary, it is found that this can be done with ease and in the least amount of time by sponging and wiping. No other ceiling provides so many advantages and at the same time such unquestioned economy as the Wheeling Steel Ceiling.

OF PARTICULAR INTEREST TO THE ERECTOR OF

STEEL CEILINGS

THE qualities which are synonymous with Wheeling Steel Ceilings have been guarded by painstaking care in every step of manufacture. Therefore Wheeling Steel Ceilings enjoy undiminished demand and continue to be a prominent feature of commercial and private buildings.

More important than any other improvement in the steel ceiling industry has been the perfection of re-pressed bead joints and die-cut nail holes. These features are largely responsible for the popularity of Wheeling Steel Ceilings as they permit easier and more perfect installations, and facilitate positive, accurate close fitting joints.

The lapping beads are of sufficient size and exactness to permit perfect alignment and to prevent any but perfect fit of the plates into position. They eliminate difficulty of maintaining a true line with furring strips. Re-pressing the beads of each plate with hard tool steel dies insures this precision which effects much saving in time with resultant economy. Not only are the beads re-pressed but at each nailing point the metal is blanked out making it unnecessary to drive nails through metal. Precision here is also an advantage much appreciated by the erector because the nail holes of one plate overlap another and register perfectly, permitting rapid nailing to furring.

WHEELING CORRUGATING COMPANY

WHEELING, W. VA.

NEW YORK	CHICAGO	PHILADELPHIA	ST. LOUIS
DETROIT	KANSAS CITY	MINNEAPOLIS	RICHMOND
COLUMBUS	BUFFALO	CHATTANOOGA	DES MOINES

(Full Size Panel No. 4395—6 x 6 inches)

The above panel illustrates the uniformity of beads and nail holes obtained by the Wheeling process of re-pressing and die-cutting. Dies used are as true to size and shape as is possible for the most expert machinists with the finest equipment to make them. The result is elimination of variation in any direction, perfection of register of all nailing points, and tight fitting, dust-proof joints.

It has been demonstrated that these features of re-pressed bead joints and die-cut nail holes bring about a decided saving in the cost of erection.

A set of these panels for your inspection will be forwarded upon request.

TERMS

On sales of material—Thirty days net cash, or two per cent discount from net amount of invoice for payment made within ten days from date of invoice. No discount allowed after ten days.

Bills not paid at maturity are subject to sight draft with exchange and cost of collection without further notice.

Orders from patrons about whom we have no satisfactory information, and who do not send references, will be shipped to our order; and draft, with bill of lading attached, will be sent to the customer's local bank for collection.

Delays will be avoided if references are furnished when inquiry is made.

Claims for errors should be made upon receipt of goods. All shipments should be checked upon arrival and errors reported immediately.

If goods are shipped according to order, they must not be returned without our consent. If shipment is damaged in being returned, credit will not be allowed to a greater amount than its value when received by us.

An invoice and bill of lading should be forwarded when goods are returned.

DIAGRAMS AND WORKING PLANS

Working plans, showing the arrangement of material shipped, are furnished in all cases where diagrams and measurements of the rooms to be ceiled are given us, and detailed drawings showing the method of applying are made. If a diagram of the room to be ceiled is furnished, with the distances from point to point, and the size and shape of all offsets, openings, and irregularities indicated, we will be able to make more intelligent estimates, and if desired submit, free of charge, a design for the approval of the customer.

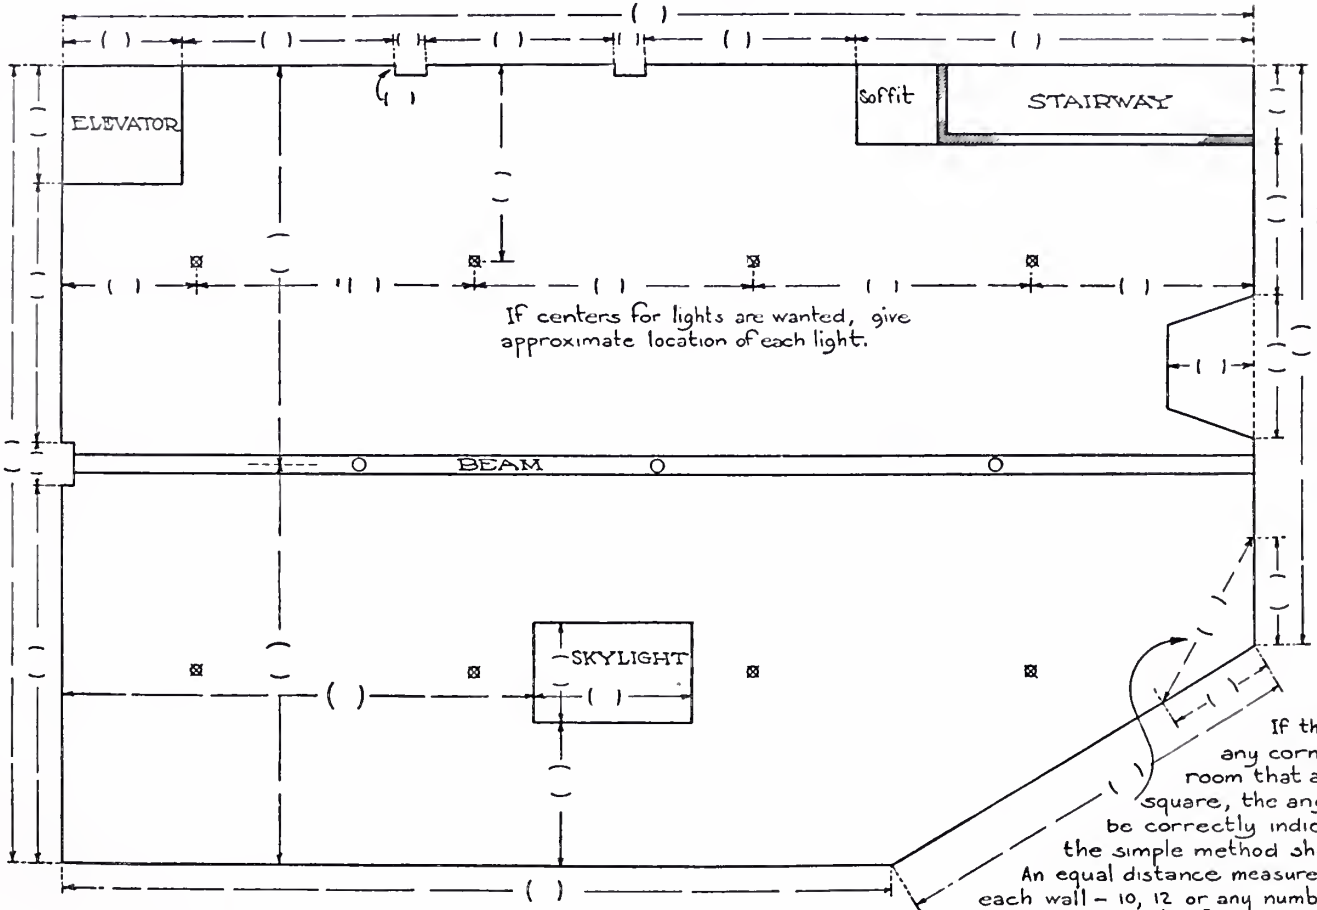
In all cases inform us the height of the room and the distance from the window and door casings to the ceiling, so that a cornice of suitable depth may be selected.

The diagram on the next page indicates the measurements and information we should have to enable us to make intelligent estimates and to avoid shortages and errors in shipments.

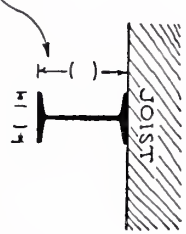
More satisfactory results will be obtained if some choice of design is indicated when inquiry is made. However, if customer expresses no preference, we will prepare an artistic arrangement suitable for the shape of the room and the purpose for which it is to be used.

WHEELING CORRUGATING CO.

Diagram indicating measurements should be furnished to enable us to make accurate estimates and to fill orders properly.
Any other openings or offsets than those indicated on this diagram should be shown, giving their sizes and location



Give exact size (both width and depth) and location of all Beams projecting below joist. State whether Beams are wood or iron.



If centers for lights are wanted, give approximate location of each light.

Indicate if Vestibule and Show Window Partitions extend to Main Ceiling
Also what depth cornice may be used across front of room.

If there are any corners in the room that are not square, the angle may be correctly indicated by the simple method shown above.
An equal distance measured along each wall – 10, 12 or any number of feet – then give the length of a straight line (to the fraction of an inch) connecting these points.

Always give total width and length of rooms, besides locating all offsets, Elevators, Stairways, Skylights, etc.
It should be stated whether Elevators and Stairways are open or enclosed

METHOD OF DETERMINING QUANTITIES AND PRICES

The unit of measure of steel ceilings is 100 square feet—called a "square"

To determine the approximate amount of material required for a room, add to the length and add to the width twice the distance the cornice is to finish down the walls, and then include the lap of filler. For instance: If the room measures 20 x 40 feet and a cornice finishing 12 inches down the walls is to be used, it is necessary to add 24 inches to each dimension for the cornice and 6 inches should be added to each for lap of filler. The cornice extends 12 inches on all four sides of the room, making the ceiling measurements 24 inches longer and 24 inches wider than the actual room measurements; the 6 inches allowed for lap of filler is to take up any unevenness that may be in the walls or construction of the building.

Example:

Size of room	20′0″ x	40′0″
Add for 12″ cornice	2′0″	2′0″
Lap of filler	0′6″	0′6″
	22′6″ x	42′6″ = 9.57 squares

This illustrates the fact that room measurements do not represent true metal ceiling measurements.

There should be no deduction for skylight or other opening unless the amount of material so displaced amounts to more than one square.

To determine the total approximate price of material, multiply the number of squares by the price per square of the design selected. If it is desired to use cornice mitres instead of cutting mitres on the job, the price of the total number of mitres to be used should be added.

Example:

Number of squares	9.57
Price of design	$ 9.10 per square
Total price ..... 9.57 squares x $9.10 =	$87.09
Add for 4 mitres at 60 cents	$ 2.40
Making grand total list price	$89.49

The above figures are based on a perfectly rectangular room measuring 20 x 40 feet, without any beams in the ceiling, any offsets, or any other irregularities affecting the quantity or price of material.

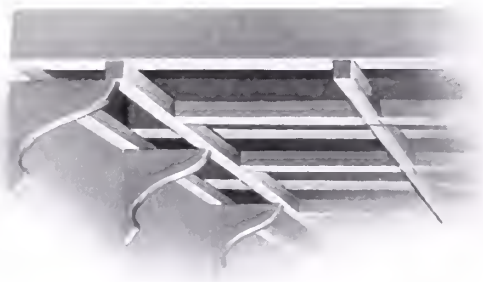
A beam 12 inches deep running the length of the room would add 2 feet more to the width and would make necessary four additional cornice mitres, the effect being that of two rooms, 10 x 40. Additional beams would increase the quantity of material and number of cornice mitres.

While the above method of figuring will give reasonably accurate results, it is always advisable, when possible, to send us a diagram or plan with measurements, so a layout of the ceiling may be prepared together with an exact bill and price of material.

The list prices in this catalog are for plates, mouldings, etc., given one coat of paint on both sides before shipping, and include regular wood brackets and nails for applying.

Furring strips and nails are extra, and will not be shipped unless ordered.

INSTRUCTIONS FOR APPLYING



Single Furring

Furring for Flat Plates and Shallow Panels

Strike chalk lines the length of the room at distances indicated on the working drawing so they will coincide with the center lines of the nailing beads on the plates. On these lines, nail ⅞ x 1¼ inch furring strips. Between these strips and across the room, nail "headers" or cross strips at distances from center to center equal to the distances between centers of the nailing beads of the plates as indicated on the working drawing. Nail strips in angle of ceiling and wall and at a distance from the wall equal to the projection of the cornice to receive the cornice brackets. Bring all strips to a uniform level by driving wedges between the strips and the old ceiling or joists, otherwise the ceiling will present an uneven appearance when completed.

Embossed plates and flush back panels may be applied to wood sheathing, in which case no furring strips will be required, but the sheathing should be level.

Furring for Deep Panels

Nail furring strips the length of the room, as for flat plates, carefully leveling them with wedges. Then nail other strips at right angles on top of these, at distances from center to center equal to the distances between centers of the nailing beads of the panels, as shown on the working drawing. Nail "headers" or cross strips at right angles to the last strips and on top of the first strips applied. This will bring all strips to the same level. To bring the cornice to the level of the ceiling, nail one strip on top of another in the angle between the ceiling and the wall, and at distance from the wall equal to the projection of the cornice.

Applying Ceiling

Apply the different members of the ceiling in the following order: Field, Filler, Mold or Border, Cornice.

Beginning at one corner, apply the ceiling plates across and along the room, keeping the lapping edges running from the light. Each piece should be carefully lapped so the beads will be straight and true. The plates should be nailed at six-inch intervals with one-inch wire nails, with small heads. The filler plate is lapped under the members on either side of it.

When stamped cornice mitres are used, they should be fitted into the corners of the room before applying the cornice.

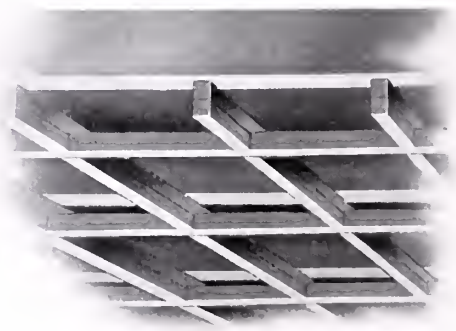
Close or "swedge" with a small, dull tool any joints which may not have lapped tightly, owing to the lapping beads having been bent or flattened in applying.

Painting Metal Ceiling

All of our ceiling material is provided with a priming coat of paint on both sides. After the material is erected, it should have two coats of good paint on the face. In order to get the best effect and properly distribute the light over the rooms, a gloss paint should not be used. Gloss paint becomes soiled and shows wear just as quickly as a paint that is flat or without gloss.

We recommend a very simple treatment, because the embossed ornaments on our metal ceilings are sufficiently decorative without elaborate painting. The best effect is produced by using white paint or a paint slightly tinted to harmonize with the general color scheme of the room. On the cornice can be used a darker tint to blend with the ceiling and other decorations in the room.

The following method is a good one: Dust or clean off any dirt or grease spots from the metal; mix the first coat of strictly pure white lead, using equal parts of raw linseed oil and turpentine; tint the same color you desire to finish with. When first coat is dry, go over with a mixture of strictly pure white lead thinned to the desired consistency with pure turpentine; tint the same as first coat.



Double or Cross Furring

ARCHITECT'S SPECIFICATIONS

STEEL CEILINGS: Where indicated on the plans, install steel ceilings (and side walls) having re-pressed beads and die-cut nail holes, manufactured by Wheeling Corrugating Company, using ceiling design No._____with cornice No._____ (and side wall design No._____). Cover the beams on the side with _____ and on the soffit with _____.

WOOD FURRING: The ceilings (and walls) shall be furred with 7/8″ by 1¼″ wood furring strips so placed that one will come back of each seam both lengthwise and crosswise of the room. The furring strips shall be brought to a common level and if the field plate requires a center support, furring shall be put in place for that purpose and brought to the same general level.

NAILING: The metal shall be nailed to the furring every six (6) inches, or closer if required, with one (1) inch oval or flat head nails. All seams shall be straight, level, and tight.

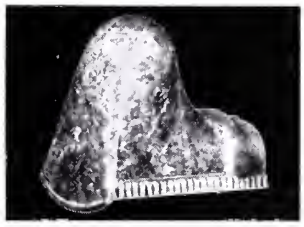
SPANISH METAL TILES

MADE OF

COP-R-LOY

The Copper Alloyed Sheet Steel

Hip Tile No. 155



Ridge Finial No. 154

FOR the base metal of Wheeling Spanish Tile and Fixtures we use the highly rust-resistant COP-R-LOY—The Copper Alloy Steel—that enjoys a preferred rating among sheet metal workers everywhere, for utmost durability in building construction. After forming, the tile and fixtures are hand-dipped in pure molten zinc, thoroughly covering and protecting all edges and surfaces.

Wheeling Spanish Tile and Fixtures can also be supplied with base of terne coated COP-R-LOY covered with good red paint, giving the roofing a very attractive appearance.

OLD STYLE ROOFING TERNES

Best known for more than a quarter of a century. They are made of COP-R-LOY, the Copper Alloyed Steel, rolled true to gauge and carefully resquared. Coated by the old style but reliable hand dipping process they offer remarkable durability. Tin roofs, utilizing terne plates, have been known to last fifty years.

Wheeling terne plates are furnished in weights and grades to meet every purpose.
